# Security

We put data security at the forefront of everything we do because we understand that your data is sensitive and valuable.

Access Control

You are in the driving seat! As an organisation you have complete control over who you invite into your account and total flexibility when it comes to giving users access to individual matters and contracts. You can further control access by using roles and permissions settings within LawVu.

We support and encourage integration with your organisation's single sign on technology using SAML2.0 and we require all SSO integrations to utilise SCIM provisioning for extra security. You can also enforce multi-factor authentication across your organisation's account.

Internally we implement a password standard with enforced complexity rules across our organisation and use SSO with enforced 2FA wherever possible.

Encryption

All data that passes between you and LawVu is encrypted using industry-standard security protocols. LawVu also encrypts all databases, backups and transaction logs at rest.

Availability

LawVu offers a 99.95% uptime SLA. The service is delivered via the extremely secure and reliable Microsoft Azure.

All LawVu data is replicated in real-time from our primary servers to a secondary data region so that in the unlikely event of a complete outage at a data center we can transition operations over to a secondary location.

In addition to the above we also maintain a 35 day point-in-time restore backup capability and push a daily backup to a secondary subscription.

Security and Compliance

LawVu maintains a comprehensive organisation wide Information Security Management System that is externally audited against a number of world class standards.

LawVu is ISO 27001 certified and SOC 1 and SOC 2 compliant and has achieved an independent seal of compliance from Compliancy Group, LLC and continues to work with them on an ongoing basis to maintain and illustrate HIPAA compliance. For more information, see our trust centre at https://lawvu.com/trust-center

We partner with industry-leading security vendors to leverage their expertise and knowledge as well as have them perform independent testing on our entire platform on a regular basis. This helps to ensure that we continue to maintain the highest possible security standards at all times.

Azure Government

LawVu serves a number of government clients worldwide and are able to offer additional security assurances via our standalone mission-critical Azure Government stack.

Azure Government offers the broadest level of certifications of any cloud provider to simplify even the most critical government compliance requirements.
